No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                   1344

CATALTYTC ACTIVITY: Release of a C-terminal dipeptide, oligopeptide-[-xaa-xbb, when xaa is not Pro, and Xbb is neither algopeptide-[-xaa-xbb, when xaa is not Pro, and Xbb is neither asp nor Glu. Converts angiotensin I to angiotensin II. COTACTOR: BINDS 2 ZINC IONS.

SUBCELLULAR LOCATION: Type I membrane protein.

ALTERNATIVE PRODUCTS: 2 isoforms; somatic (shown here) and testis-specific (AC P22966); are produced by alternative splicing. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M2.

CATALYTIC ACTIVITY: Release of a C-terminal dipeptide, oligopeptide-|-xaa-xbb, when xaa is not Pro, and Xbb is neither Asp nor Glu. Converts angiotensin I to angiotensin II.

COPACTOR: BINDS 1 ZINC ION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIMILARITY: BELONGS TO PEPTIDASE FAMILY M2.

                                                         THE TERMINAL HIS-LEU, THIS RESULTS IN AN INCREASE OF THE VASOCONSTRICTOR ACTIVITY OF ANGIOTENSIN.

-!- CATALYTIC ACTIVITY: Release of a C-terminal dipeptide, oligopeptide-|-xaa-xbb, when Xaa is not Pro, and Xbb is nei Asp nor Glu. Converts angiotensin I to angiotensin II.
-!- COPACTOR: BINDS 2 ZINC IONS (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- ALTERNATIVE PRODUCTS: 2 isoforms; somatic (shown here) and specific (AC P22967); are produced by alternative splicing.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M2.

-I- FUNCTION: CONVERTS ANGIOTENSIN I TO ANGIOTENSIN II BY THE TERMINAL HIS-LEU, THAIS RESULTS IN AN INCREASE OF TVASCOONSTRICTOR ACTIVITY OF ANGIOTENSIN.

-I- CATALYTIC ACTIVITY: Release of a C-terminal dipeptide, oligopeptide-|-xaa-xbb, when Xaa is not Pro, and Xbb i ASP nor Glu. Converts angiotensin I to angiotensin II.

-I- COFACTOR: BINDS 2 ZINC IONS (BY SIMILARITY)

-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- ALTERNATIVE PRODUCTS: 2 isoforms; somatic (shown here)

CATALYTIC ACTIVITY: Release of a C-terminal dipeptide, clipopeptide-| raa-xbb, when xaa is not Pro, and Xbb is Asp nor Glu. Converts angiotensin I to angiotensin II.

COFACTOR: BINDS 2 ZINC IONS (BY SIMILARITY).

SUBCELLULAR LOCATION: Type I membrane protein.

ALITERNATIVE PRODUCTS: 2 isoforms; somatic (shown here) a specific (AC P22968); are produced by alternative splici SIMILARITY: BELONGS TO PEPTIDASE FAMILY M2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CATALYTIC ACTIVITY: Release of a C-terminal dipeptide, oligopeptide-|-xaa-xbb, when Xaa is not Pro, and Xbb is neither Asp nor Glu. Converts angiotensin I to angiotensin II. COFACTOR: BINDS 1 ZINC ION.

SUBCELLULAR LOCATION: Type I membrane protein.

ALTERNATIVE PRODUCTS: 2 isoforms; testis-specific (shown here) somatic (AC P12822); are produced by alternative splicing.

TISSUE SPECIFICITY: SPERMATOCYTES, ADULT TESTIS.
